Muhammad Hassan Raza

Cofounder and CIO, Entropy & Co. · Lahore, Pakistan

I run product and engineering for a team of about a dozen, across Obelisk, October and client work. I build backend and AI systems where correctness, latency and failure handling matter, and I've had 170 pull requests merged into open-source projects including kitty, calibre, libtorrent and Docling.

EXPERIENCE

Cofounder and CIO Entropy & Co. `Jun 2025 to Present`

Product and engineering for a team of about a dozen. Roadmap, architecture and delivery across Obelisk (AI marketing), October (creator campaigns) and client work. The company won Ignite's acceleration round, had financing approved under Accelerate Prosperity, and exhibited at GITEX 2025 and LEAP 2026.

Technical Product Engineering Lead Entropy & Co. `Sep 2024 to Jun 2025`

Workflow automation that cut a two-hour manual onboarding flow to 25 minutes. AI document processing, streaming Django and Vue apps, and pulling services out of a monolith without breaking the product.

Senior Software Engineer Entropy & Co. `Aug 2023 to Sep 2024`

FastAPI and Django services under real traffic: query work, caching, and reporting paths fast enough that people trusted them. One reporting endpoint went from 750 ms to 230 ms.

Engineering for a YC-backed insurance startup Contract `Mar 2026 to Present`

Internal operations tooling: admin APIs, reporting, and diagnostics for the team running the platform day to day.

Founder Commit Software Solutions `2020 to Present`

Client software for businesses that run on it daily. Polaris, a retail operations platform, came out of here and is still in use in retail shops.

Before 2024, mostly alongside university: AI engineering at WebNoodle (LangChain document pipelines), a backend internship at Arrivy (Flask, BigQuery, GCP), and teaching assistant work at FAST-NUCES.

OPEN SOURCE

170 merged pull requests across 13 projects since 2026: fallow (33), pyscn (31), libtorrent (22), calibre (22), kitty (18), Mole (17), docling (10), qBittorrent (6).

TEACHING

Lab Instructor FAST-NUCES `2024 to 2025`

Operating Systems, Software Construction and Development, and Web Engineering labs.

Teaching Assistant FAST-NUCES `2022 to 2024`

Software Engineering, Mobile Development, Information Security and Software Project Management.

EDUCATION

MS Computer Science FAST-NUCES, Lahore

`Started 2024, on hold`

BS Software Engineering FAST-NUCES, Lahore

`2020 to 2024`

Dean's List, Fall 2023 and Spring 2024

SKILLS

Backend

Python, Django, FastAPI, PostgreSQL, Redis, Celery, Go

AI systems

LangGraph, LangChain, RAG pipelines, Agent evaluation, Vertex AI, OpenAI and Anthropic APIs

Frontend

Vue, Nuxt, React, Next.js, TypeScript

Infrastructure

GCP, AWS, Docker, GitHub Actions

AWARDS

- 3rd place, NaSCon '22 Code Studio
- 4th place, NaSCon '23 UI/UX competition
